

Candle Care Guide

Scents & Serenity pride themselves in offering a luxurious range of home fragrance products made from the finest quality ingredients available. All of our candles have been expertly blended and hand poured in Yorkshire using pure soy wax without any added setting agents or chemicals. Our candles hold the maximum fragrance load for the wax type ensuring consistent great hot and cold scent throw. All our products have their own unique eco-friendly credentials, please refer to our re-use & recycle guide for more information.

To get the most out of your candle please follow these simple steps:

- Trim your eco wick to 5mm before lighting to ensure your candle burns cleanly and safely.
- Always place the candle on a level surface that is heat resistant. Burn the candle away from draughts and flammable objects, children and pets.
- The first burn is the most important. Burn consistently for at least 2 hours (or until the melt pool has reached the glass container).
- Extinguish the candle using a snuffer. Blowing the wick can cause damage; if you have to do this blow gently. Remove any debris from the melt pool before allowing the wax to set.
- After each burn let the candle set fully before moving it or lighting it again to prevent accidental injury or damage to the candle.
- Do not burn candles for longer than 4 hours at a time.

SCENTS & SERENITY ASSUMES NO RESPONSIBILITY FOR ANY DAMAGE OR INJURY THAT MAY OCCUR DUE TO MISUSE OF CANDLES, AND CANDLE BURNING.
